## 8-QUEENS PROBLEM

### AIM:

To implement an 8-Queens problem using Python.

You are given an 8x8 board; find a way to place 8 queens such that no queen can attack any other queen on the chessboard. A queen can only be attacked if it lies on the same row, same column, or the same diagonal as any other queen.

Print all the possible configurations.

To solve this problem, we will make use of the Backtracking algorithm. The backtracking algorithm, in general checks all possible configurations and test whether the required result is obtained or not. For the given problem, we will explore all possible positions the queens can be relatively placed at. The solution will be correct when the number of placed queens = 8.

Reg.no:220701030

CODE:

```
def printSolution(board):
    for i in range(len(board)):
        for j in range(len(board)):
            print(board[i][j], end=' ')
        print()

def isSafe(board, row, col):
    for i in range(col):
        if board[row][i] == 1:
            return False

    for i, j in zip(range(row, -1, -1), range(col, -1, -1)):
        if board[i][j] == 1:
            return False

    for i, j in zip(range(row, len(board), 1), range(col, -1, -1)):
        if board[i][j] == 1:
            return False

    return True

def solveNQUtil(board, col):
    if col >= len(board):
        return True

    for i in range(len(board)):
        if isSafe(board, i, col):
            board[i][col] = 1

            if solveNQUtil(board, col + 1):
                return True

            board[i][col] = 0
    return False

def solveNQ():
    def solveNQ():
        N = int(input("Enter the size of the board (N): "))

        board = [[0 for _ in range(N)] for _ in range(N)]

        if not solveNQUtil(board, 0):
            print("Solution does not exist")
            return False

        printSolution(board)
        return True

    solveNQ()
```

**Reg.no:220701030**

**OUTPUT:**

```
Enter the size of the board (N): 8
1 0 0 0 0 0 0 0
0 0 0 0 0 0 1 0
0 0 0 0 1 0 0 0
0 0 0 0 0 0 0 1
0 1 0 0 0 0 0 0
0 0 0 1 0 0 0 0
0 0 0 0 0 1 0 0
0 0 1 0 0 0 0 0
True
```

**RESULT:**

Thus, the 8-Queens program has been implemented successfully.
